

# GCC - Safety & Security

## Use Case

### Their Problem

*Needed a means to assess threats, critical events and level of risk as they happen*

Executive and operations teams spend vast amounts of time monitoring disparate data sources like weather, earthquakes, transportation, social incidents and more in relation to physical locations of facilities and impacts on employees and customers is a major concern.

## Top Benefits

Increase employee safety at locations and while traveling.

Safeguard facilities from external and internal threats.

Secure assets and infrastructure with IoT investments.

*"This is a game changer!"*

- GSOC Manager,  
Investment Banking Firm

## Our Solution

*Integrates and layers all real-time data feeds to protect assets globally*

The Live Earth platform provides a common operational picture of all data collected from internal and external sources, layered together in real-time to increase the safety of employees in the office and during travel, infrastructure and IoT investments.
