

Live Earth Customer

A global financial services provider was struggling to provide a meaningful ESG risk rating for their assets, relying on a manual process for the risk rating.

“The geospatial time-series capabilities were exactly what we needed. Before Live Earth, we couldn’t assemble the ESG data in a timely manner.”

- Head of ESG Equity Research, APAC

Problem

- Analysts pulled the internal data and 3rd party data manually.
- Loading the data into cumbersome Excel sheets to understand the results.
- Difficult to make sense of the data in Excel.
- 2 weeks to pull data from the different sources.

The Live Earth Solution

Live Earth quickly sources and structures the ESG data, creating a time-series visualization that’s simple to digest for customer facing reporting.

- Automatically source data from siloed internal and 3rd party sources.
- Analysts proactively notified of risk event by email or SMS.
- Easy to see risk scores across assets and ability to assess the situations further.
- Real-time notifications of risk, scores and proactive threats over time.
